

BALLISTIC PROTECTIVE VESTS

We are designing our ballistic protective vests according to customer specifications. Before offering them to our customers, we test and verify our ballistic protective solutions in our accredited testing laboratory according to specific threats listed in the international standard's protection levels and document the results. All our light, ergonomic and top quality ballistic protective vests pass through the preset testing protocols as per the sampling standards of our quality assurance system before, during and after production.

Our ballistic protective vests can be used together with our additional ballistic protective attachments for the body parts such as groin, shoulder, upper arm, leg, throat, waist and neck etc). Thanks to our Molle design, several magazine pouches and bags can be attached to the carrier vest, which is waterproof and highly abrasion resistant, made of polyamide 6.6 materials. We also offer flame retardant carriers if needed by the customers.

In order to increase the protection levels by adding a hard armour plate, our vests are equipped with integrated front and back plate pockets. Soft ballistic panels are packed as watertight and lightproof and inserted in to the vests. All our vests come with a carry on bag made of the same high quality carrier vest fabric. We are the leading ballistic vest manufacturer of Turkey with a production capacity of 1000-1500 vests per day depending on model design. All our ballistic vest models are field tested.

COVERT VEST WITH STAB PROTECTION

Concealed ballistic vests are designed to be worn under the shirt so that it is not visible that the user is under ballistic protection. Concealed vests are used by military and law enforcement personnel, VIPs, executive directors and people who are doing transport of valuables. This vest protects against light hand gun bullets and also provides stab protection.

- Manufactured in 5 sizes in accordance with NIJ0101.04 level II.

TACTICAL VEST WITH LOAD BEARING BELT

Tactical ballistic vests are used by military, law enforcement and private security personnel. They are worn over the uniform and can be equipped by additional ballistic protective parts. These vests can be manufactured in several colors or camouflage patterns as per customer request. Tactical soft vests provide protection against hand guns. This model is equipped by a ballistic waist belt which transfers the load to users hips and prevents quick tiring of the personnel.

- Manufactured in 3 sizes in accordance with NIJ0101.06 level IIIA.
- This vest provides protection against edge shot and close shot threats.
- Front and back ballistic plate pockets are integrated.
- This vest provides additional ballistic protection on groin, neck, throat, shoulder and waist parts of the body.
